7SIGNAL

SOLUTION BRIEF

STOP MAINTAINING YOUR WI-FI AND START MANAGING IT

In most organisations the Wi-Fi network has become a mission critical asset because it enables workers, systems, and customers to communicate and remain operationally efficient. As a result, it's time to stop chasing down Wi-Fi issues with handheld troubleshooting tools, and it's time to start managing it centrally like your other strategic assets.

As the Wi-Fi Performance Company, 7SIGNAL's mission is to help you identify issues before they impact operational efficiency.

The Clients Point of View

7SIGNAL's system of sensors, apps, and agents live on the network edge, continually measuring Wi-Fi performance from the client's point of view. All this data is made available in the EyeQ dashboard, presenting a single view of the Wi-Fi experience across your network.

This enables you to proactively manage Wi-Fi performance trouble spots from a web browser, before users and business critical applications are affected, instead of reacting to issues when it's too late.

Value to Your Organisation

With alerts and notifications when Wi-Fi performance is below your SLAs, IT professionals can address issues proactively and make better device decisions for your organisation. In addition, they can avoid those "drop-everything" moments when connectivity and throughput disrupt productivity.

This unprecedented visibility into the Wi-Fi user experience simplifies problem resolution, enables IT to meet global Wi-Fi performance SLAs, and dramatically reduces the total cost of ownership of your mission critical wireless network.

WHY 7SIGNAL

- Get organisation-wide visibility of end user Wi-Fi experiences

- 24x7 Wi-Fi network benchmarking and alerting

- Leverage your own devices to crowdsource Wi-Fi performance data

- Easily monitor Wi-Fi network performance in remote locations

- Gain Wi-Fi analytics with key performance indicators

- Performance testing is discrete, at pre-defined intervals

- Rapid SaaS deployment model
